

Benchmarks&Verifications

Chapter 1

Introduction

Chapter 2

Linear Static and Element Performance

2.1 Twisted Beam under Tip	3
2.2 Curved Cantilevered Beam under Tip Load	5
2.3 Cantilevered Beam under Various Tip Loads	7
2.4 Pinched Hemispherical Shell with Hole	10
2.5 Elliptic Plane Stress under Uniform Outward Pressure	12
2.6 Plane Truss under Concentrated Load	14
2.7 Skewed Plate under Uniform Pressure	15
2.8 Thick Plate under Uniform Pressure	17
2.9 Cantilever with Variable Thickness	19
2.10 Scordellis-Lo Barrel Vault	21
2.11 Z-section Cantilever	23
2.12 Thick Cylinder Subjected to Internal Pressure Load	25
2.13 Hemisphere under Point Loads	27
2.14 Thick/Thin Square Plates	29
2.15 Cylindrical Shell Patch Test	31
2.16 Axisymmetric Shell under Pressure	33
2.17 Stresses Caused by a Point Load	35
2.18 Stresses Caused by a Line Load	37
2.19 Stresses Caused by a Circular Load	39
2.20 Stresses Caused by a Strip Load	41
2.21 Stress in Soil with Hydrostatic Pressure	43
2.22 Stress in Partially Saturated Soil	46
References	
2.23 Prestressed Concrete with Sloping Reinforcement	50
2.24 Prestressed Concrete with Straight Eccentric Tendon	51

Chapter 3

Material

Nonlinearity

3.1 Modified Cam Clay Model with Drained Condition	53
3.2 Modified Cam Clay Model with Undrained Condition	56
3.3 Internally Pressurized Spherical Shell Composed of von Mises Material	58
3.4 A V-notch Bar composed of Elastic-Perfectly Plastic Tresca Material Model	61
3.5 Uniformly Loaded Circular Plate	63
3.6 Two Coaxial Tubes	65
3.7 Residual Stress Problem	67
3.8 End-Loaded Tapered Cantilever Composed of Tresca Material Model	69
3.9 Strip Footing in Sand	71
3.10 Bearing Capacity of Smooth Square Footing on a Frictionless Material	73
3.11 Rigid Punch Penetrating into Clay	75
3.12 Cylindrical Hole in an Infinite Mohr-Coulomb Medium	77
3.13 Strip and Circular Footings on a Mohr-Coulomb Soil	81
3.14 Effect of Strain Rate on Undrained Effective Stress Path and Stress-Strain Response	84
3.15 Oedometer Test for Hardening Soil with Small Strain Stiffness with Drained Condition	86
3.16 Triaxial Test for Hardening Soil with Small Strain Stiffness with Drained Condition	88
3.17 Undrained Triaxial Test with SCLAY1 Material Model	94
3.18 Unit Tests of Coulomb Friction Model for Interface Elements	96
3.19 Unit Tests for Pile, Pile tip Elements	98
3.20 Slope Stability for Generalized Hoek Brown	100
References	102

Chapter 4

Dynamics

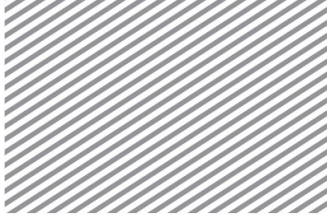

4.1 Pin-ended Cross	103
4.2 Thin Square Cantilever Plate	105
4.3 Simply Supported Thick Annular Plate (Axisymmetric)	108
4.4 Cantilevered Square Plane Stress	110
4.5 Cantilevered Tapered Membrane	112
4.6 Deep Simply Supported Beam	114
4.7 Simply Supported Thin Square Plate	116
4.8 Simply Supported Thick Square Plate	118
4.9 Response Spectrum of a Simply Supported Beam	120
4.10 Linear Dynamic Analyses of a Truss	123
4.11 Cantilever Subjected to Earthquake Motion	125
4.12 Rayleigh Wave Velocity	129
4.13 FWD Load on Pavement	131
4.14 Earthquake Response of a Layered Soil Deposit	133
4.15 Earthquake Response of a Layered Soil Deposit	139
References	142

Chapter 5

Seepage and Consolidation

5.1 Unconfined Flow on a Horizontal Impermeable Boundary	143
5.2 Flow through an Earth Dam	145
5.3 Confined Flow around an Impermeable Wall	147
5.4 Confined Flow around an Impermeable Dam with a Wall	149
5.5 Unconfined Flow through a Dam	151
5.6 Unconfined Flow toward a Riverbank	153
5.7 Unconfined Flow in Layered Slope with Multiple Seepage Faces	155
5.8 Pumping a Radial Well	157
5.9 Terzaghi Consolidation	159
5.10 Stress in Saturated Soil with Seepage	163
References	166

Chapter 6

Stability

Analysis

Performance

6.1 Homogeneous Slope on Rigid Foundation	167
6.2 Two-sided Earth Embankment	169
6.3 Failure of Clay Slope with a Thin Weak Layer	171
References	174

Chapter 7

Hysteresis Model

7.1 Multi-linear Model	175
7.2 Kinematic hardening Model	178
7.3 Peak-Oriented model	181
7.4 Origin-Oriented model	184
7.5 Clough Model	187
7.6 Degrading Model	190
7.7 Takeda Model	193
7.8 Modified Takeda Model	198
7.9 Ramberg Osgood Model	221
7.10 Hardin Drnevich Model	204

Chapter 8

Heat Transfer

Analysis

Performance

8.1 Two-dimensional heat transfer with convection	207
8.2 Two-dimensional heat transfer in bi-material	209
8.3 One-dimensional transient heat transfer - I	211
8.4 One-dimensional transient heat transfer – II	213
8.5 Transient heat transfer with convection	216
8.6 Transient heat transfer with heat generation	218
8.7 Axisymmetric transient heat transfer with convection	220
Reference	221

Chapter 9

Linear Buckling

Analysis

9.1 Column buckling	223
9.2 Three member frame	225
9.3 Uniaxially compressed clamped square plate	227
9.4 Rectangular plate under concentrated center load	229
9.5 Axially compressed cylinder	231
9.6 L-bracket plate under in-plane load	233
Reference	235

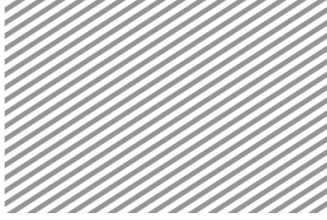

Chapter 10

Linear Buckling

Analysis

10.1 Contact Patch test	237
10.2 Rigid punch contact	239
10.3 Hertzian contact	241
10.4 Sliding wedge with linear springs	243
10.5 Cantilever beam and a rigid curvilinear surface	244
10.6 Sliding and rolling of a ring on a rigid surface	245
10.7 Crushing of a pipe	247
Reference	249

Chapter 11

Fatigue

Analysis

11.1 Fatigue analysis – Plate element	251
11.2 Fatigue analysis – Plain strain element	253
11.3 Fatigue analysis – Solid element	255
Reference	257

Chapter 12

Material

Viscoelasticity

12.1 Uniaxial load	259
12.2 Uniaxial displacement	261
12.3 Biaxial load	263
12.4 Negative biaxial load	265
12.5 Uniaxial load	268
12.6 Uniaxial stepped load	270
12.7 Biaxial load	272
12.8 Biaxial stepped load	274
12.9 Negative biaxial load	276
12.10 Negative biaxial stepped load	278
12.11 Uniaxial load	280
12.12 Uniaxial load	282
12.13 Stepped load	284
12.14 Biaxial load	286
12.15 Biaxial stepped load	288
12.16 Negative biaxial load	290
12.17 Negative biaxial stepped load	292
12.18 Time dependent negative biaxial stepped load	294
